

E-tegra®
Stent Graft System

PURE PERFORMANCE AND QUALITY: STENT GRAFT SYSTEMS BY JOTEC

JOTEC is an innovation-oriented company with consistent focus on its core competencies: the development and manufacture of high-quality medical devices for the treatment of aortic and peripheral vascular diseases. In close cooperation with clinical users, we develop and produce therapeutic solutions that fulfil the highest practical requirements and ensure safe and effective treatment of patients.

- The product portfolio comprises:**
- Endovascular stent graft systems
 - Conventional vascular prostheses
 - Interventional accessories such as sheaths, guide wires and balloon catheters

Innovation for improving therapy outcome

With the E-tegra Stent Graft System, JOTEC provides a completely new design of AAA stent graft system that makes even difficult vascular anatomies treatable, thus extending endovascular treatment of infrarenal abdominal aortic aneurysms. The long term therapeutic success for patients and the safety of clinical users are given top priority.

Positioning

Separate release of the proximal stent allows exact placement of the stent graft.

Fixation

Proximal laser cut stent with anchors for suprarenal stent graft fixation.

Sealing

Special stent design for secure sealing.

Conformability

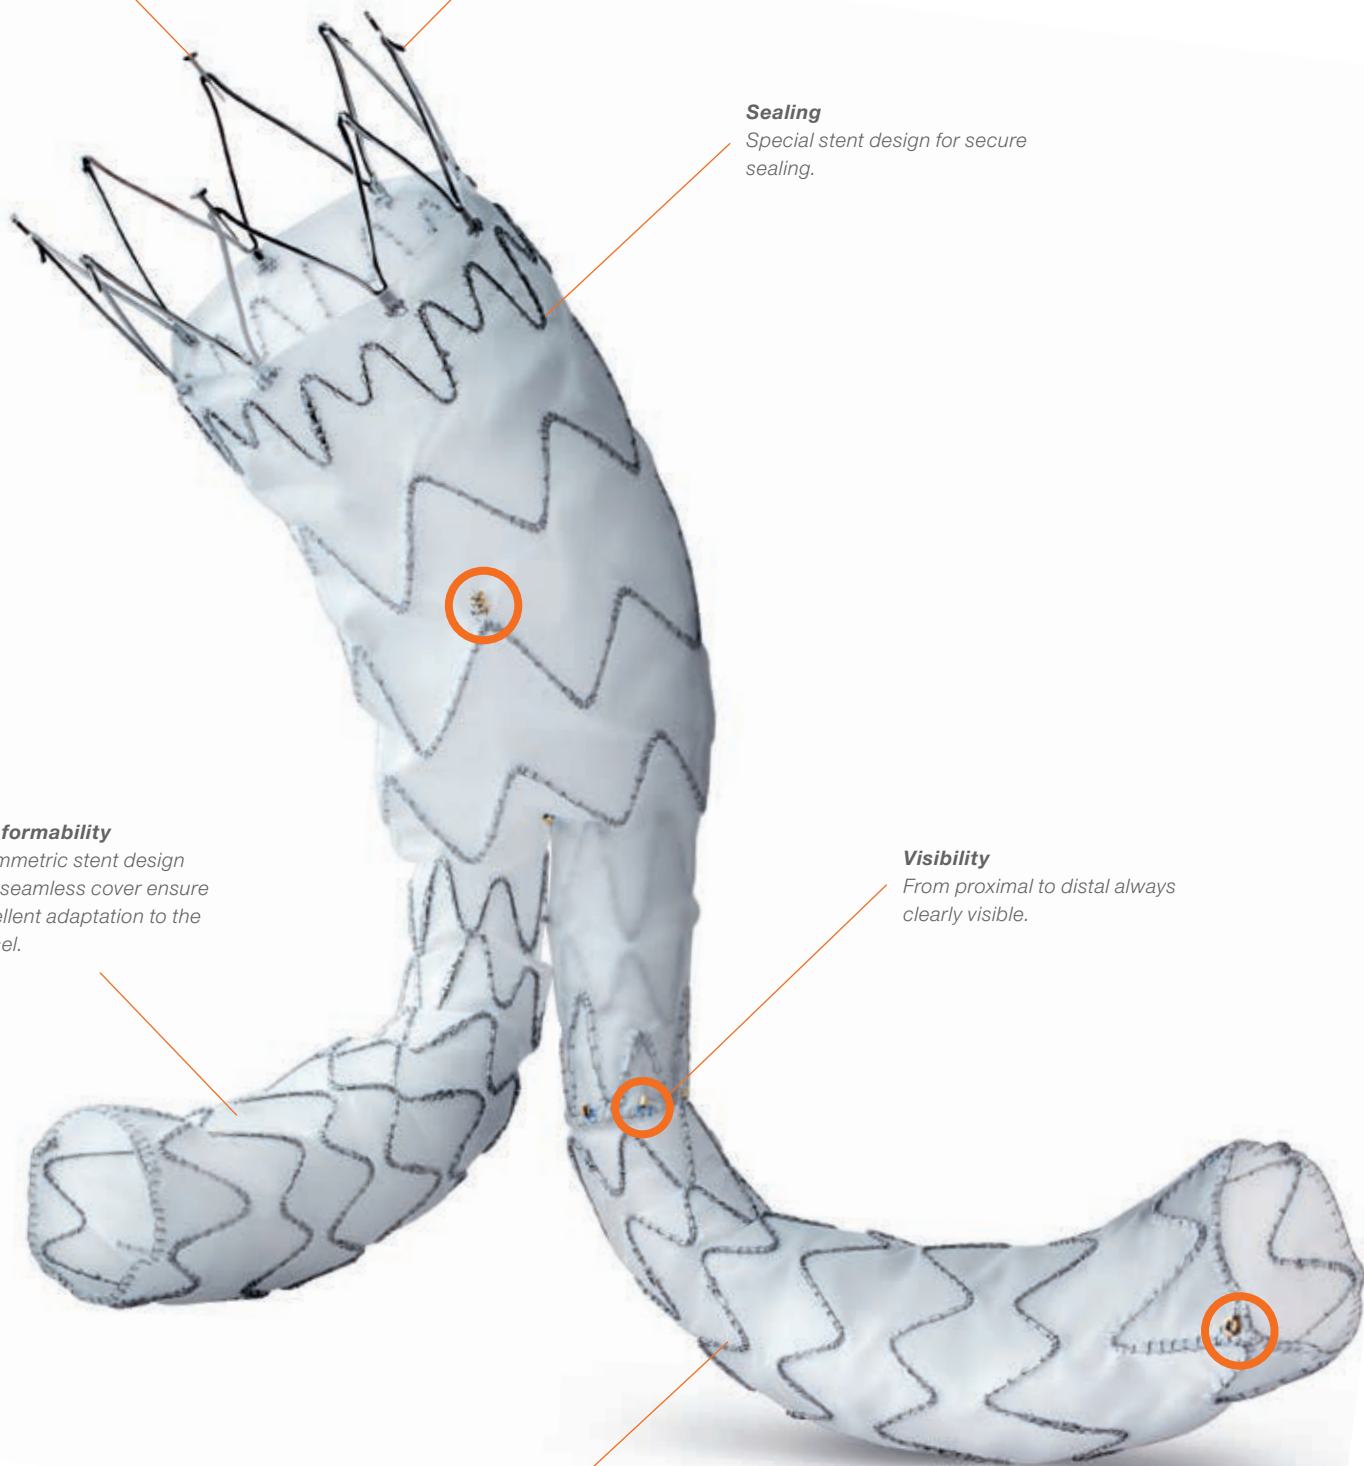

Asymmetric stent design and seamless cover ensure excellent adaptation to the vessel.

Visibility

From proximal to distal always clearly visible.

Individuality

Modular stent graft design and comprehensive size range widen the scope for endovascular treatment.

SQUEEZE-TO-RELEASE MECHANISM FOR PRECISE AND CONTROLLED HANDLING

The unique and intuitive JOTEC delivery system with Squeeze-to-Release mechanism supports the user by ensuring excellent control during each phase of the implantation.

The low profile delivery systems start at only 18 F for the main bodies, aortic extensions and aorto-uni-iliac components and at only 16 F for contralateral legs and iliac extensions.

Positioning

Separate release of the proximal stent for precise stent graft placement.

Control

The control handle secures the position of the delivery system during the procedure.

Safety

Release button remains securely locked until proximal stent release is activated.

Flexibility

The catheter enables safe pushability and precise trackability.

Adaptability

User-friendly short delivery system for all leg extensions.

Smoothness

The hydrophilic coating eases introduction and advancement of the system.

Precision

The Squeeze-to-Release mechanism allows for gradual or continuous release with minimum effort.

E-TEGRA STENT GRAFT: THE COMPONENTS AT A GLANCE

E-tegra is a bi-modular design and consists of a main body and a contralateral leg. The system can be individually adapted thanks to the availability of iliac and aortic extensions. For selected cases the aorto-uni-iliac device will be indicated.

01 Main body

Delivery system: 18, 20F

Ø proximal
23–36 mm

02 Contralateral leg

Delivery system: 16F

Ø proximal
15 mm

03 Iliac extension

Delivery System: 16, 18F

Ø proximal
13–27 mm

04 Aortic extension

Delivery system: 18, 20F

05 Aorto-uni-iliac

Delivery system: 18, 20F

Ø proximal
23–36 mm

Product overview and order information

01 Main body

| Order Number | Ø proximal (mm) | Ø distal (mm) | Trunk length (mm) | Covered length (mm) | Delivery System (F*) |
